

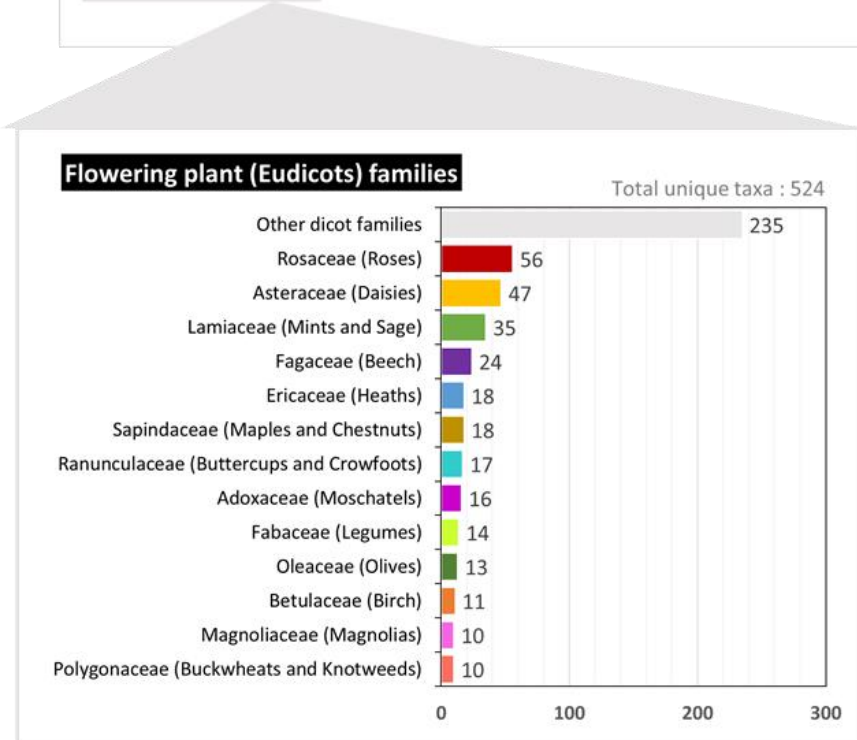

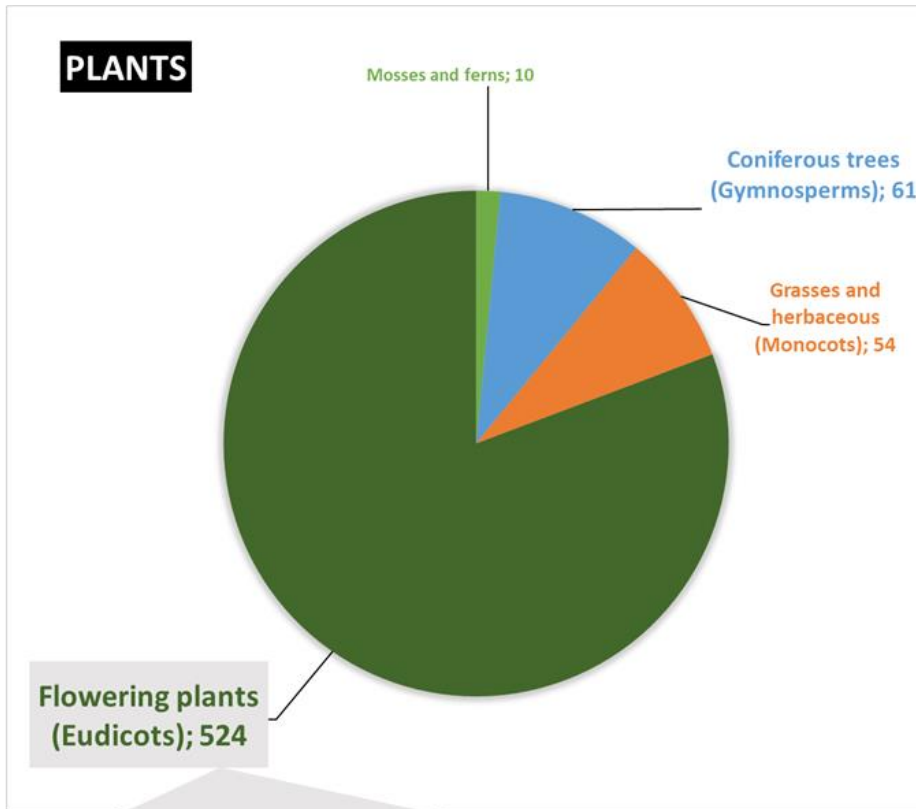

**Figure 1. Animal groups identified to date through our citizen science initiatives at Temple Ambler Field Station.** Values represent unique taxa identified in the field to the lowest taxonomic level possible. These data were collected by field citizen scientists during events on campus or were recorded in public databases (iNaturalist and eBird). Want to become a Citizen Science Owlet too? Check out our **Citizen Science webpage**.

**Figure 2. Plant diversity identified to date in the natural environments and designed gardens of the Temple Ambler Field Station and Ambler Arboretum.** These values represent unique taxa identified to the lowest taxonomic level possible. Highlighted are 14 of the 116 flowering plant families present that include 524 taxonomic groups. A full list can be found in our **species database**. Cultivated specimens in our Greenhouse were not included here.

## Temple Ambler Field Station Species List

<b>database_title</b>	Temple Ambler Field Station Species List
<b>last_update</b>	22October2020
<b>description</b>	This database includes all species identified to their lowest taxonomic level possible in the natural environments and designed gardens on the Temple Ambler campus. These are occurrence records and each taxon is only entered once. This is an occurrence record, not an abundance record. IDs were performed by senior scientists and specialists, as well as citizen scientists visiting campus. Field identifications were recorded and then verified against the GBIF (Global Biodiversity Information Facility) backbone for normalization of species names. This is a living database and will be updated accordingly as new identifications are incorporated or verified. Any questions, issues or concerns regarding these data, please contact us at <a href="mailto:fieldstation@temple.edu">fieldstation@temple.edu</a> ( <a href="mailto:fieldstation@temple.edu">fieldstation[at]temple[dot]edu</a> )
<b>column_names</b>	<b>column_descriptions</b>
<b>rank</b>	lowest taxonomic id for given individual(s) within databases
<b>kingdom</b>	"kingdom" classification following GBIF list. Animalia, Archaea, Bacteria, Chromista, Fungi, Platae, Protozoa, Viruses. These are major classifications and do not express phylogenetic relationships.
<b>phylum</b>	all current accepted phyla according to GBIF
<b>class</b>	all current accepted classes according to GBIF
<b>order</b>	all current accepted orders according to GBIF
<b>family</b>	all current accepted families according to GBIF
<b>genus</b>	all current accepted genus according to GBIF
<b>species</b>	binomial scientific name of a given species
<b>notes</b>	any memo related to that species entry in the database
